

PLUMBING & HVAC

J. Lawrence Hall

Serving commercial and industrial HVAC clients throughout New England since 1937

Founded in 1937 by one man in an office on Pearson Avenue in Nashua and a Chevy Roadster which was converted to a pickup truck, J. Lawrence Hall has grown into a design-build mechanical contracting firm serving commercial and industrial HVAC clients throughout New England.

Through the years, J. Lawrence Hall Company developed a strong reputation for superior service. The company grew, and in 1945, J. Lawrence Hall relocated from Pearson Avenue to a larger facility at 11 Main Street, where it remained for 38 years.

In 1955, after serving in the United States Air Force, Lawrence's son, Phil Hall, joined the company as a professional mechanical engineer.

The company incorporated and continued to grow, expanding into design and installation of specialized HVAC and refrigeration systems.

By the 1980s, J. Lawrence Hall Company had again outgrown its location and relocated to 10 Cotton Road, where sales, technical, and administrative staff expanded to accommodate a sales volume that had grown more than threefold.

J. Lawrence Hall Company remained at Cotton Road for 28 years. Phil in turn passed control of the company to his two sons, Elliot and Charlie Hall, in the 1990s.

In 1996, a sheet metal shop was added to facilitate the manufacture of ductwork, to improve the company's control and accountability of their HVAC installation systems.

In 2003, a plumbing division was added to increase full-service mechanical contractor capabilities.

With the ever expanding operations and a strong commitment to community, the company's current location at 17 Progress Avenue in Nashua was purchased and moved into in December 2011.

J. Lawrence Hall is a full service, commercial plumbing and HVAC resource, capable of designing, installing and servicing sophisticated HVAC systems. J. Lawrence Hall specializes in: Computer Rooms, Industrial Humidification, Air Make-up Systems, Energy Management Systems, Steam/Hot Water Boilers and more.
